

DRS, DISASTER RECOVERY SERVICES & OPEX FORM COOPERATIVE ALLIANCE

First published on July 22, 2005, updated and revised July 27, 2017

DRS, Disaster Recovery Services (DRS) of Charlotte, NC and OPEX Corporation of Moorestown, NJ, the industry leader in high-speed mailroom automation technologies, have formed an alliance to ensure high-speed mail opening and remittance processing backup capabilities for any DRS customer who is also an OPEX end user.

Under the alliance, OPEX will provide DRS with an array of its patented high-speed payment processing systems, maintenance, and training to ensure that fully functional mail opening back-up and remittance capabilities are available for DRS customers which utilize OPEX products.

"This is an important innovation that ensures that high and medium speed mail extraction and remittance processing systems critical to the daily operations of many corporate enterprises will be available for disaster recovery plan testing and actual emergency usage during a disaster," said Steven King, Certified Business Continuity Planner (CBCP) and President of DRS. "End-users should insist on verifying the reliability of their disaster recovery plans through complete testing of all key processing system components, including OPEX mail opening system technologies and critical payment processing needs. This strategic alliance with OPEX further strengthens both company's continued commitment to providing excellent products and services to the mail automation and document imaging market."

"This alliance provides OPEX customers with a dedicated disaster recovery resource to ensure that crucial document processing actions are maintained and available during disaster recovery testing or in the event of an actual customer disaster," added Dann Worrell, National Sales Director, Incoming and Scanning at OPEX.

About OPEX Corporation
